

Bomb threat awareness basics

**To help reduce you and your
families chances of being a
victim of terrorist bombing!**

**Haganah Security International
www.haganahsecurity.com**

Purpose of this presentation

It is not the purpose of this presentation to scare you out of taking that long awaited vacation. It is not for the purposes of putting fear into you and let the bad things of this world keep you locked behind closed doors.

There is a verse in the bible that says “and the truth shall set you free”. I believe in this quote. And I would like to interpret this also to mean, and the truth of the facts will set you free of fear. When I travel the world I feel free, free because of the education. I educate myself on the bad things of this world and like a good ally cat, I avoid those areas.

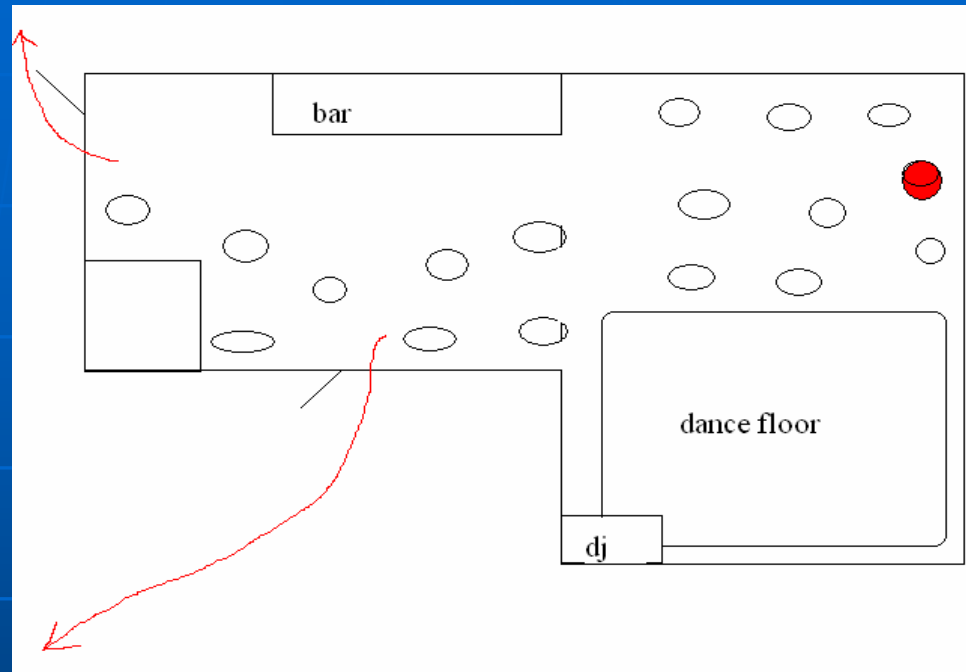

This presentation is here to help you gain a little understanding of what police security, and consultants know. (Or may not know as in some cases I have learned ☹)

Learn and grow !

Here are some things you may want to beat into your head!!

- Be aware.
- Be alert.
- Keep alert in transportation areas
(Bus, train, tourist taxi areas).
- Watch for items that don't belong.
- Watch for bags, backpacks, packages, people wearing cloths that are out of season (in warm countries).
- Stay clear of areas populated by many tourists.
- In front of hotels watch for cars that looked weighed down kinda heavy look. The body is low to the ground. like someone put something heavy in it.
- Watch the news for things going on in your area or country. There are many places I visit where I do not speak the local language, But pictures and video speak loudly. Watch local TV news.

Bomb threat evacuation

The “red spot is the bomb” when you evacuate a building with a possible explosive device, get as far back as you can. Normally I would recommend 500 meters. This is due to the fact that many times if there is 1 bomb, there will be 1 more outside the area. **REMEMBER** if there is 1 there are 2 !!!

Do not hang around to see what is going to happen, many times there is another explosive device In a car or any possible place that a bomb can be placed.

Bomb threat area

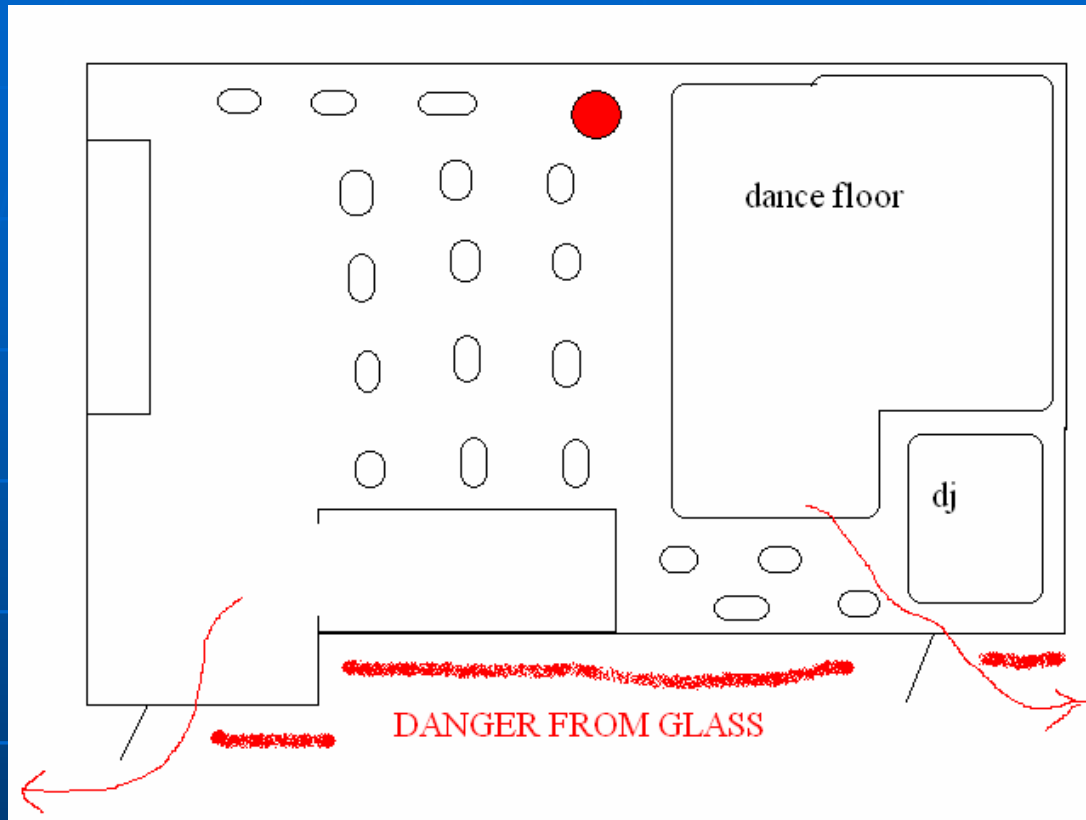

When bombs are put into a night club or any such place, stay far away from the windows, many are placed so that the windows and other things become projectiles to maximize the blast effect.

Typically you should avoid outside seating area, at times terrorists ram bomb packed cars into the crowd. If you plan to sit outside, see if the surrounding area has some poles of heavy plant pots blocking the area from cars driving up to the seated area. They must be strong enough to stop a car.

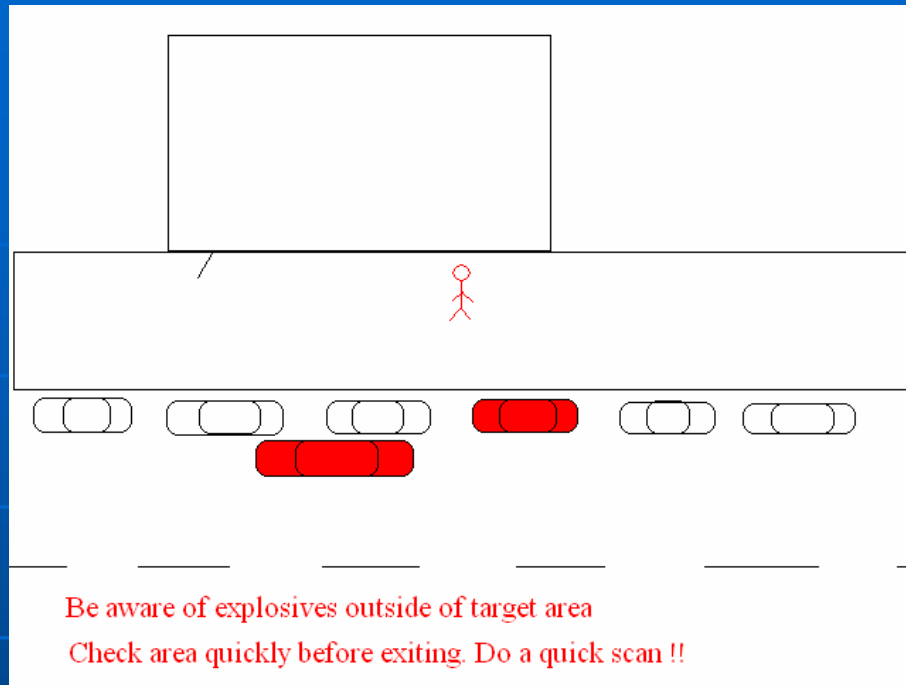

Bomb area evacuation

Here again we see a possible area of evacuation.

Never stand in the area. Run to the left and run to the right. 500 meters minimum. Run and don't stop running. If you hang around in the area, you will be the victim of bomb number 2 sitting close by.

Area dangers

When I teach security personnel bomb threat awareness in the nightclubs, one of the most important things I tell them is to watch the outside area around you. The red represents dangers. When you exit the danger area, at times the dangers will be like I illustrated. If you see that other people are not going to a safe area Don't do as the rest of the sheep before the slaughter and graze around.

RUN !!!!!!!!!!!!!!!

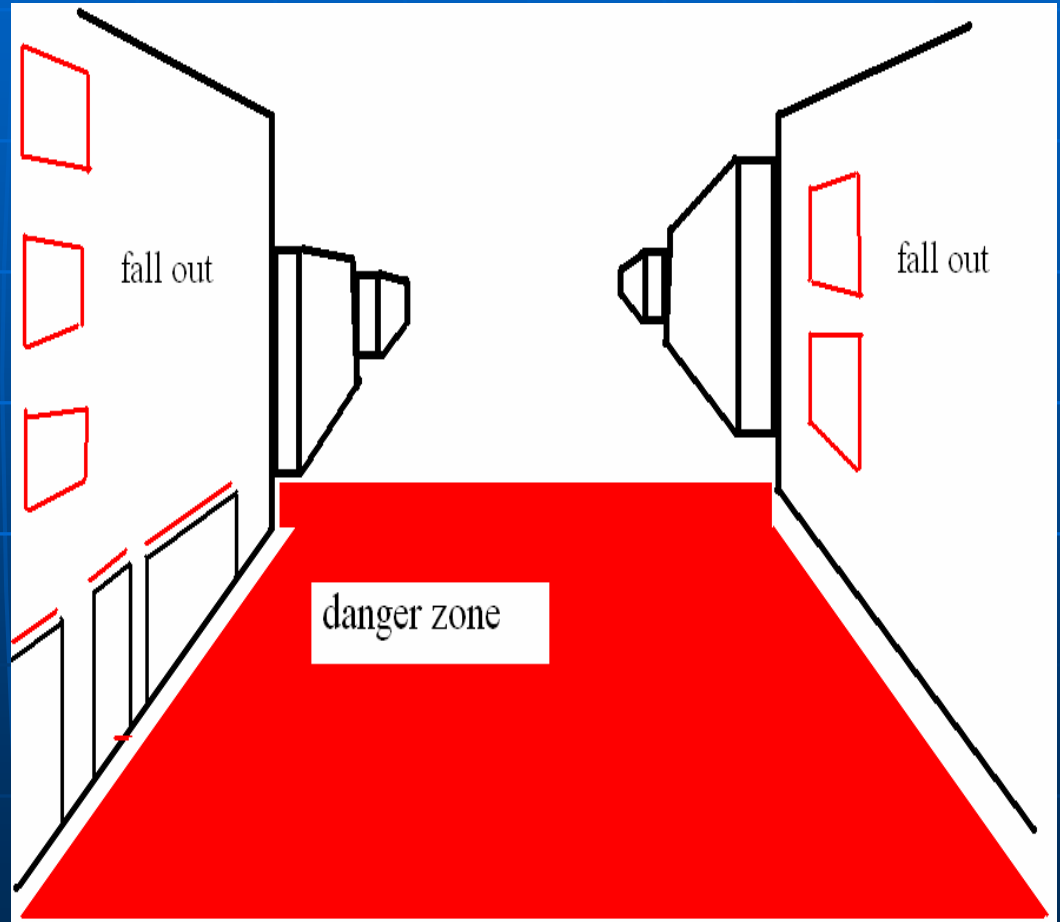

Can you spot the danger area if that red car on the right was the car bomb ?

If you were standing across the street from that red car, where would you run if you knew of the danger ? And how far ?

Danger zone

If you have not thought about fallout, think about this. Fallout of a bomb blast cause 50 percent more deaths within the explosion area. If you were to hide behind other cars, the broken glass from windows may fall on you and cut you up very badly if not killing you.

Bomb jacket

Here is an example of a home made bomb vest. Notice the hand held trigger, Some are equipped with push button on the chest and on the back in case they are grabbed, this will make the bomb explode. If someone does capture the suicide bomber, another terrorist that is standing at a distance will make a call on his cell phone which will then ignite the bomb.

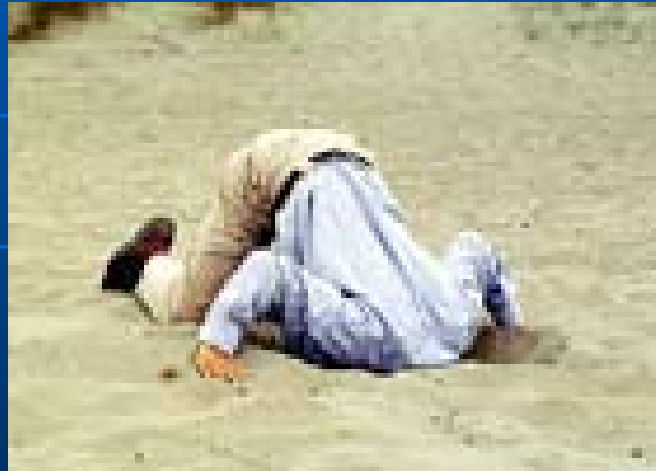

Evacuation

Bomb threat awareness classes

Haganah Security International teaches citizens as well as security firms on bomb threat awareness. These classes are designed to give Hotel, Nightclubs, Security firms as well as Police a realistic approach to bomb threat awareness.

Shamuel B. Kohen has spent many years in study of bomb attacks on civilian targets. He teaches public organizations the hard facts of civilians as targets.

Many people choose to live with their heads in the sand. What do you choose?
